Summary

Computer Science undergraduate at UET Lahore with hands-on experience in backend and web development using Python, Django, C#, and ASP.NET Core MVC. Strong understanding of OOP, MVC architecture, REST APIs, and database fundamentals. Seeking an entry-level backend or full-stack software engineering role.

Projects

NextGen AI Desktop Assistant (Final Year Project)

Python, PySide6, Ollama, ChromaDB, Speech Recognition

- Built a fully offline AI desktop assistant using local LLMs via Ollama, enabling private, internet-free AI interactions.
- Implemented contextual memory with ChromaDB (RAG), allowing the assistant to recall conversation history across sessions.
- Designed a modular PySide6 GUI with structured voice-command workflows and a command-execution testing pipeline.
- Designed architecture to support real-time voice interaction and system-level automation (file management, app launching).

Automax – Car Selling Platform

Django, PostgreSQL

- Developed a web platform for users to sell cars, featuring a role-based system with Admin and Seller accounts.
- Implemented secure authentication with account creation and car listing uploads with photos and descriptions.
- Built admin panel for full control over listings and user management.
- Utilized Django ORM for efficient database management and PostgreSQL for scalable data storage.

Mess Management System

ASP.NET Core MVC, Entity Framework, SQL Server, Stripe

- Built a role-based billing platform with JWT authentication stored in HTTP-only cookies for XSS and CSRF protection.
- Restricted admin routes (menu, attendance, billing) using ASP.NET Core role-based authorization policies.
- Enabled real-time attendance marking via jQuery AJAX and automated monthly bill generation using Entity Framework Core.
- Integrated Stripe Checkout with webhook support for online bill payments and server-side HTML invoice generation.

Experience

Associate Software Engineer, Big Bytes Insight Tech (Python, Scrapy, MySQL)

Jan 2026 – March 2026

- Built 2 Scrapy spiders scraping vehicle listings and property data (400K+ records each).
- Automated large-scale data collection pipelines reducing manual data extraction effort.
- Stored raw data to CSV and MySQL using a staging and cleaned table schema for normalized storage.
- Cleaned and processed raw data with Pandas and built ETL pipelines for end-to-end scraping, preprocessing, and storage.

Education

University of Engineering and Technology, Lahore, Bachelor of Computer Science *Expected June 2026*

CGPA: 3.2 / 4.0

Relevant Coursework: Web Technologies, Enterprise Applications Development, Machine Learning

Skills

Programming Languages: Python, Java Script ,C#, HTML, CSS, SQL

Frameworks: Django, ASP.NET Core MVC

Database: PostgreSQL, SQLite, MySQL, SQL Server

Tools: OOP, MVC Architecture, REST APIs, Authentication

Tools: Google Colab, Git, PyCharm, VS Code, Visual Studio

Problem Solving: Data Analysis, Machine Learning

Certifications

2025: Python and Django: The Complete Django Web Development Course (Udemy)

2025: Databases and SQL for Data Science with Python (IBM – Coursera)
